Summary of Items Observed:

On this date Caltrans OSM Quality Assurance (QA) Inspector, Tim McClendon was present during the time noted above for observations relative to the work being performed.

The QA Inspector randomly observed the following work in progress:

Segment 6BE

The QA Inspector began performing a random preliminary visual inspection of the welding performed in the OBG Assembly Bay on the internal structure of this segment. Some areas marked for repair were repaired at the time of inspection and some areas that were marked to be ground and welded were not repaired at the time of inspection. All external welds of this segment will be inspected at a later date.

The QA inspector performed Magnetic Particle (MT) inspection on Floor Beam SEG 15A – PP43 weld number 004. No rejectable indications were found by the QA inspector.

The QA inspector performed Magnetic Particle (MT) inspection on Longitudinal Diaphragm SEG 30C weld number 015. No rejectable indications were found by the QA inspector.

Unless otherwise noted, all work observed on this date appeared to generally comply with applicable contract documents.
